About Us

and our Company

About us

Introduction

Experience lies at the heart of all discoveries. It is the fuel that propels us all into the future. It is the calm in the chaos of today's modern age, where everything happens at the speed of light. It is the beacon in the storm when technology, software and the consumer change their minds and ideas faster than ever before.

With a core team that has a collective experience of over 100 years in the software industry, B2IT is at the cutting edge of the world's breaking trends. We've seen the waves that have lasted and know which ones are worth pursuing. To stay ahead of the curve, business intelligence needs to have its finger on the thrumming pulse of what is happening in the world. From the start of 2010, B2IT has made this our mission, to learn how to keep your business current, thriving and efficient.

Our Team

Every great business is a team. And every great team needs all its players to perform at their greatest potential. We accomplish this by running incentive programs for everyone in our company. Whether a junior employee who has just begun at B2IT, or a long-standing director, each person has an overarching goal that they're chasing and a healthy way of being measured and rewarded for their efforts. That's how we ensure that everyone at B2IT is traveling towards common goals and finding new ways of bringing the greatest value to our clients.

Nothing can happen without first having a vision to accomplish it. Our owners are also our leaders, allowing our business to overcome any hurdle it faces with their hands on approach to business. Like a ship kept on course despite the intensity of a storm, our owner managers are the visionaries with the relevant expertise in Industrial Engineering to turn every implementation into a celebrated victory, for us and our clients. These men are: Jarno Loubser and Mourits Muller, both qualified Industrial Engineers.

Our Experience

With every development and innovation in the technological capacity of the world, the field of Information Technology grows and changes. Our team's experience includes a wide range of the relevant areas, covering the most important aspects of application systems, so that your business always has its bases covered.

Some of the areas that we're most proficient in are:

- Billing and Operational Support (BOS)
- Business Process Management (BPM)
- Business Rules Management, and (BRM)
- Customer Relationship Management (CRM)
- Enterprise Resource Planning (ERP)
- Point of Sales (POS)
- Robotic Process Automation (RPA)
- Supply Chain Management (SCM)
- Systems Integration (SI)

Our most current and passionate exploration comes in the areas of Business Intelligence, Search & AI and Robotic Process Automation, helping our business partners maximise their effectiveness whilst minimising their risk, exposure, spending and effort.

Our willingness to learn at a voracious speed has helped us to become one of the world's foremost authorities in Qlik and ThoughtSpot. We are summoned to share our wisdom and expertise across Europe, Africa and domestically in South Africa. Our dedication to staying current and our willingness to learn are the reasons why Africa and Europe are just the start of our solutions.

Our Approach and Philosophy

Our Approach and Philosophy

Value beyond expectation. At the core of everything that we do, this is the heart of our business. Every day, in every way that we can, we ask ourselves how we can discover the best ways to turn your business's needs into solutions that create value beyond what you could have ever expected.

Our track-record is nothing short of impressive, with not a single failed implementation. We don't mention this to impress you. We say it to point out a simple fact – no track record could have the longevity that ours has, if it weren't solid, reliable and duplicable in various industries. Our discipline in implementing project management systems sets us apart from our competitors.

Our adaptability in project management methods means that we're equally fluid using Scrum Methodology like Agile, or more traditional systems like Waterfall. But most importantly, our track record is part of our inspired philosophy to leave a worldwide legacy in the BI industry.

In sector after sector, we've found new and innovative ways of adapting our client's information technology needs to meet the rigorous requirements of their industries.
